

RESIDENTIAL · CANADA

Custom 3D Welded Wire Perimeter Fence for a Creekside Acreage Estate

LOCATION
Canada

PROJECT TYPE
Residential Estate

FENCE LENGTH
~780 m

FINISH
Black PVC Coated

CHALLENGE

This property needed a long-run perimeter fence crossing varied terrain — including a natural creek corridor and dense tree line — bordering a newly developed residential estate. The fence had to hold a clean, continuous line over uneven, rocky ground while meeting the durability and aesthetic standards expected on a high-end property.

SOLUTION

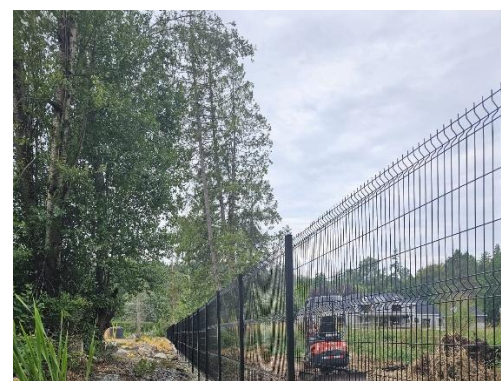

Shengsen supplied a complete 3D welded wire fence system in a durable matte black finish, engineered to hold a clean, continuous line across the property's uneven terrain. Every post was custom-built with an integrated mounting point for the client's LED lighting system — a tailored detail worked into the design without disrupting the standard bracket assembly or installation process. A matching single-swing access gate completed the perimeter.

RESULT

The finished fence line follows the natural contour of the creek and tree boundary with consistent panel alignment across difficult terrain, integrating cleanly into the landscape while clearly defining the new estate's property line.
